

## Equipment Refurbishment Services

When your older equipment consistently is not working at its optimum level or appears to be at the end of its lifecycle, MI Technologies can add years of useful value with our equipment refurbishment services.

- Save 40-60% over the cost of new equipment
- A standard factory warranty offered on all parts and work performed
- Successfully refurbished equipment over 30 years old to a like-new state
- Solutions to avoid downtime

### Description

Refurbishment can significantly extend the useful life of your range equipment and is an often preferred alternative to new equipment purchases. Many customers find that rebuild and refurbishment programs can save them 40-60% over the cost of new equipment. Continued use of existing equipment also eliminates costs associated with operation training, certifications and service training on new systems.

#### Like-new for longer useful service

MI Technologies has successfully refurbished equipment over 30 years old to a like-new state for useful service. Our thorough inspection and repair work often results in better performance from your equipment.

Candidates for refurbishment include:

- Positioners
- Model towers
- Feeds
- Standard gain dipoles
- Antennas

#### New Lease on Life, New Warranty

The skill and experience of our Refurbishment Service technicians are so extensive we can ensure that each system we refurbish will perform to original OEM specifications. We have such confidence in our Refurbishment Services; we offer a standard factory warranty on all parts and work performed in a refurbishment.

### Options

We also offer optional services that can complement the refurbishment of your equipment.

#### Post-Warranty Support Plan

Our Post-Warranty Support Plan helps further protect your investment. You gain the benefits of scheduled maintenance, calibrations and priority on service calls in our three-tiered plan offering, while freeing your staff from the chore of scheduling maintenance. For more details, please refer to the data sheet on Post-Warranty Support Plans.

#### Two Alternatives to Downtime

If your equipment is critical to your operations, we offer two solutions to avoiding downtime.

##### 1. Outsource testing

Consider outsourcing your testing at MI Technologies' test range. We offer a full suite of flexible Range Test Services.

##### 2. Rental units

We can provide a comparable unit for your use at your test range during the refurbishment. Models available for rental are limited, so plan your rental well in advance.
