

NSI-300V-6x6

6' x 6' (1.8 m x 1.8 m) Vertical Planar Near-field Measurement System

DESCRIPTION

The 300V-6x6 is an ideal system for measuring medium and high gain antennas (>15 dBi) with medium sized apertures making it suitable for testing medium arrays or reflector antennas. The 300V-6x6 is based on an inverted "T" design and is constructed of steel. For high stability a welded dual-pontoon base is used. This simple design is easy to align, accurate, and can be dismantled for transport or storage within one day. The high capacity probe carriage can accommodate probes as large as a WR-650.

CAPABILITIES

The system interfaces with a wide variety of RF equipment and is capable of measuring amplitude and phase patterns from mid-range L-band to mmWave bands. The system includes NSI Antenna Measurement Software.

The system software runs on a Pentium based measurement workstation and provides automatic setup of scans based on measurement parameters and desired output. Measured data can be processed for far-field or holographic patterns yielding complete characterization of the antenna's performance. A single data set provides information on antenna gain, side lobe structure, beam pointing and cross polarization.

The Model 300V-6x6 can be supplied with a variety of options to enhance system performance. This includes cylindrical or spherical options to accommodate lower gain antennas.
