

Technical Services and Support Plans

MI Technologies has a strong commitment to our customers' success. The service and product support team helps customers meet their test and measurement requirements for the full life cycle of our products. This complete spectrum of service and product support offerings is performed by MI's integrated worldwide service organization.

Testing Services

MI Technologies offers its testing facilities giving customers the flexibility to choose facility configuration, equipment and level of support required.

Facility Design Services

To assist with test facility development worldwide, MI offers consulting, technical surveys, and turnkey installations governed by a quality project management process.

Field Probe Services

MI Technologies offers precision field probe measurements and probe data analysis to characterize the electromagnetic performance of a test facility.

Precision Alignment Services

Ensures overall measurement accuracy in a test facility by aligning positioning equipment and verifying high frequency performance.

Relocation Services

Providing efficient test facility relocation leveraging MI's experience in project management, equipment installation and performance verification.

Training and Certifications

MI provides comprehensive, results-oriented training and certification programs to ensure efficient and insightful test range usage.

Software Maintenance Plans

MI offers comprehensive and flexible technical support and upgrade coverage for you test system software.

Post Warranty Support Plans

Offering integrated and flexible customer care plans to meet maintenance, calibration and repair service needs.
